Cattle on holding are not under movement restrictions for other animal disease or public health reasons (excluding 13-day standstill)

Withdrawal periods have been observed for all veterinary medicines/other treatments administered to these animals whilst on this holding and previous holding.

To the best of my knowledge these animals are not suffering from any disease or condition that may affect the safety of meat derived from them. No analysis of samples taken from animals on the above holding or other samples have shown that the animals in this consignment may have been exposed to any disease or condition that may affect the safety of meat or to substances likely to result in residues in meat.
